

VocoPro SilentPA Chat

Quick Setup Guide

Thank you for purchasing **Vocopro's SilentPA Chat** system for two-way communication.

In order for this system to work properly, you do not want to set all four packs to the same channel.

You will need to set one pair of **Transmitter** and **Receiver** to one channel. *Ex: Channel 1*

And set the other pair of **Transmitter** and **Receiver** to another channel. *Ex: Channel 2*

Person **A** will wear the **Transmitter** set to **Channel 1**, and the **Receiver** set to **Channel 2**.

Person **B** will wear the **Transmitter** set to **Channel 2**, and the **Receiver** set to **Channel 1**.

This will allow Person A to speak into the Channel 1 Transmitter and Person B will hear it from the Channel 1 Receiver. And Person B will speak into the Channel 2 Transmitter and be heard by Person A through the Channel 2 Receiver.

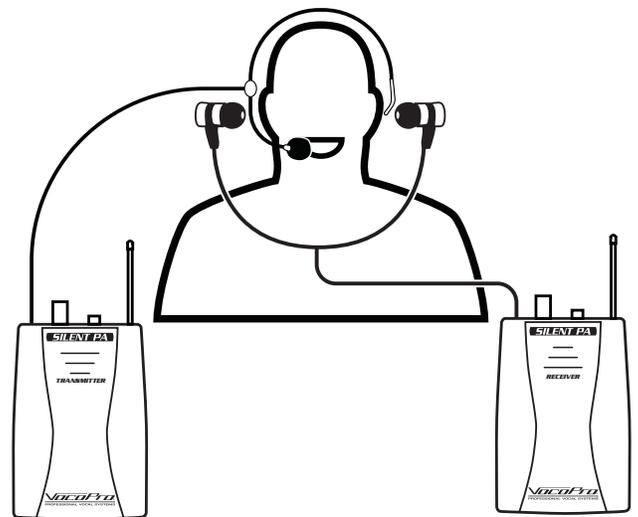

Person A

**Transmitter
Ch. 1**

**Receiver
Ch. 2**

Person B

**Transmitter
Ch. 2**

**Receiver
Ch. 1**
